

In re Appln. of KAMIMURA et al.
Application No. Unassigned

SPECIFICATION AMENDMENTS

Replace the paragraph beginning at page 1, line 11 with:

A water treatment apparatus using an oxidizer, such as ozone, and ultraviolet radiation in combination ~~is to decompose~~ decomposes substances to be treated such as organochlorine compounds in the wastewater ~~by using radical seeds, such as hydroxyl radicals, etc., which are produced by irradiating the oxidizer, such as ozone, with ultraviolet light onto an oxidizer such as ozone, etc.~~

Replace the paragraph beginning at page 1, line 29 with:

With such a known water treatment apparatus, using the diffuser as an oxidizer mixing means, however, there was a limit to the control of the diameters or sizes of gas bubbles, thus making it difficult to increase ~~a~~ gas-liquid interfacial area to any satisfactory extent. Therefore, the dissolution rate of ozone was slow, and there was a problem that the substances to be treated ~~was~~ were not ~~able to be~~ decomposed at a high efficiency in a short period of time.
